## Summary of Qualifications:

A strongly motivated senior web developer with specific strengths in front end web technologies. Thoroughly proficient in the latest coding standards and practices with a thirst for creating inspiring work. My goal is to utilize my knowledge of web technologies to provide creative input and direction/leadership for web applications while still maintaining the highest quality of code and latest technologies.

## Technical Ability:

As a full stack developer I am required to be an expert in both front end and back end technologies. My front end knowledge not only includes HTML / CSS / Javascript but also build tools such as Grunt.JS and SASS which allow for a more efficient front end development process. My backend knowledge is primarily in PHP with some experience in ASP.Net and Node.JS.

Additional skills in identifying improvements in user experience based on designs and UX documents and interoperating ways to make an application more accessible to users using techniques such as responsive design.

## Experience:

### **Crispin Porter and Bogusky (2010 - Present) :**

*Senior Interactive Developer, Focusing on Front End Web Technologies*

- Worked on Large Enterprise Web Applications & short lived 'evergreen' applications
- Worked with producers, designers, and developers in a team environment
- Provided development time estimates for proposed projects
